KALMIA LATIFOLIA (Mountain Laurel)

## IMPORTANT *Read Before Ordering*

**Our Hardy Native Plants** are shipped direct from Highlands Nursery, in the western North Carolina mountains, from Pineola, N. C., freight station. The present freight rate to New York, Boston and Philadelphia is 96½ cents per 100 pounds. Special express rates, connecting with Norfolk steamers.

**We claim superior packing**, our export shipments reaching the most remote countries in perfect condition. **Packing charged for at cost.**

**Foreign remittances** should be sent by International Postal Money Order, drawn on Boston, Mass., Post Office, or by New York or Boston Exchange. An American dollar is equal to a little more than four (4) English shillings, four (4) German marks, or five (5) francs.

**Our foreign correspondents** are notified that we use the Western Union and A. B. C. Telegraph and Cable Codes. Cable address, **Kelmont-Boston.**

**Claims** must be made immediately on receipt of goods. **All shipments travel at consignee's risk.** Shipping begins about September 15 and lasts till December, and in spring from March 1 to May 15. Give shipping instructions unless you wish to leave it to us. We use our best judgment but assume no risk.

**Growing Rhododendrons, Azaleas, Kalmias, Hemlocks** and other plants of this class in wholesale quantities will continue to be our specialty. All the leading parks, cemeteries and nurseries of America, as well as those abroad, have been satisfactorily supplied in the past with many hundreds of thousands of plants from **Highlands Nursery.**

**Our Nurseries** are inspected by the North Carolina Commission for controlling crop pests, and certificate of inspection is sent out with every shipment

## COLLECTED PLANTS

All plants offered in this Catalogue are nursery-grown, unless specially noted, but can often be supplied in strong, collected stock when desired.

Our facilities are unapproached elsewhere for collecting the best stock at a low cost, and an experience of 18 years and well-trained collectors enable us to assure buyers that orders for "collected" plants will receive the same attention and care as though we intended planting the stock ourselves. As a rule, however, we do not recommend the extensive use of collected stock and cannot guarantee it in any instance.

### DO YOU WANT HARDY STOCK?

**T**HE location of **HIGHLANDS NURSERY**, at the summit of the Blue Ridge, in western North Carolina, 3,800 feet among the clouds, and under the shadow of the great Grandfather mountain (the highest peak in the Blue Ridge range) insures long, cool summers and cold winters, which are very favorable to the growth of these beautiful native ornamentals, producing a perfectly hardy stock—a most important point with northern planters. The thermometer often reaches an extreme of 10 to 15 degrees below, and every few years will go down as low as 20 degrees or more below zero.

The Azaleas, Rhododendrons, and most of the ericaceous plants herein offered thrive best in rich, peaty soils and partially shaded situations. A good soil can be made by excavating 2 to 3 feet of the surface, and filling with equal parts of good leaf-mold or other decayed vegetable matter and surface loam, with one-tenth or more of sharp sand. Swamp muck or field sod may be used. Mulching (spent tan, moss, leaves, hay, etc.) is always useful, and is necessary where the ground is very dry. Lime, in large quantities, in any form is very damaging to Rhododendrons, Azaleas and ericaceous plants in general. As a rule, give the plants a deep soil, with plenty of well-decayed vegetable food and good drainage, and the results will be satisfactory. Always give Rhododendrons a northern exposure where possible, and do not cultivate deep, as ericaceous plants are surface feeders.

## RHODODENDRON MAXIMUM

The Great American Rose Bay

## and KALMIA LATIFOLIA

From Pennsylvania Mountains

The Mountain Laurel

The use of collected Rhododendrons and Kalmias for quickly and permanently producing fine landscape effects is now well established, and with any reasonable expenditure there is no other possible way to obtain the results to be had by the use of these magnificent hardy broad-leaved evergreens. We have been in the business of collecting and growing Rhododendrons, Kalmias, Azaleas and other hardy American plants for seventeen years, and our sources of supply are not only unexcelled, but the long experience of our employees renders a commission placed in our hands peculiarly safe.

Our supply and advantages being unlimited, we are prepared to accept orders for fall or spring delivery, with an assurance of prompt service and satisfactory material that must give good results.

In car-load lots we collect sizes from 2 to 10 feet in height, with corresponding diameter; the number to the car, say forty or fifty to three or four hundred, depends entirely on the size. We are glad to give prices and all information possible to prospective purchasers, and specially invite correspondence on the subject from landscape architects, park superintendents and boards of estates.

*Leucothoe catesbaei*, *Galax aphylla* and the true *Rhododendron catawbiense* from the Carolina mountains we also collect by the car-load, but the peculiar conditions of distance from railroads to plant stations, and rather heavy freight rates, make their use more limited to the producing of finer finished effects in connection with *Rhododendron maximum* and *Kalmia latifolia*, or with other planting. The foliage effects of these broad-leaved evergreens is beyond comparison, the leaves being rich in color, the *Leucothoe* and *Galax* turning brilliant bronze tints in fall and winter. Full information for the asking.

**HARLAN P. KELSEY**, Tremont Building, Boston, Mass.

**NOTE.**—A beautifully illustrated and descriptive retail Catalogue of Hardy American Plants sent on request.

**Purchasing Department.**—We have special facilities for inspection and purchase of fine nursery stock other than native, and are pleased to submit prices and estimates on any list.

# Kelsey's Hardy American Plants, Highlands Nursery

## Conifers and Evergreen Trees, continued

	Size	Per 10	100	1,000
TSUGA caroliniana, Carolina Hemlock	12 to 18 in.	\$2 50	\$20 00	
" " " "	18 to 24 in.	3 50	30 00	
" " " "	2 to 3 ft.	8 00		
" " " "	3 to 4 ft.	20 00		
" " " "	\$3.50 to \$10 ea. 4 to 8 ft.			

This grand new Hemlock, introduced by us, possesses a distinct pyramidal growth, and attains a height of 40 to 50 feet. Its dense, dark foliage and graceful habit are only approached by some of the finer Japanese Hemlocks, which it somewhat resembles. Some fine specimens are now to be seen in the Arnold Arboretum, being the first plants of this Hemlock ever sent out, and supplied by us to Prof. C. S. Sargent, Director, in 1884.

ASCYRUM hypericoides, St. Andrew's Cross. Clumps.		1 00		

## AZALEAS

The American Azaleas are among the choicest of all ornamentals, whether exotic or native, and were but rarely seen in cultivation before being disseminated by HIGHLANDS NURSERY. Large masses of "Great Flame-Colored Azalea," *A. calendulacea*, when seen in flower, present the most gorgeous effects, the shades varying from deep crimson to a bright sulphur-yellow, and its complete hardiness is unquestionable. The foliage of *A. arborescens* is the finest of all the Azaleas, remaining a clear, shiny green throughout the summer, a characteristic not usual with this family. The large, white, sweet-scented flowers appear the last of all the Azaleas, and the numerous pink-tipped stamens protruding give a most beautiful effect. *Azalea vaseyi* is one of the finest introductions of late years; the flowers, appearing before the foliage in April in the greatest profusion, are white to deep pink; attains a height of 12 to 15 feet. *A. nudiflora* (deep pink) and *A. viscosa* (white) are pretty, dwarfier varieties, very useful in the under shrubbery.

	Size	Per 10	100	1,000
AZALEA arborescens, Fragrant White Azalea	6 to 12 in.	\$2 00	\$15 00	\$125 00

Rhododendron maximum.  
(See page 12.)

## RHODODENDRONS, KALMIAS and other HARDY NATIVE EVERGREEN SHRUBS

The following (mostly broad-leaved) Shrub Evergreens are of greatest value for massing and for ground covering. All are perfectly hardy, and most of them produce a grand show of flowers. It is needless here to more than call attention to the large stock of Rhododendrons and *Kalmia latifolia* offered below. All are carefully transplanted and cultivated, and are clean and stocky. We have special methods of growing, gained by long experience, which insure healthy, well-ripened wood and good balls on roots, and the large quantities grown enable us to produce and sell at extraordinarily low prices. They will also be collected to order cheaply in any quantities.

A specialty is made of collecting to order by the car-load clumps and large plants of *Rhododendron maximum*, *Kalmia latifolia*, *Leucothoë catesbaei*, and others, which are sure to grow and produce a fine immediate effect. Cost for this service gladly estimated, and correspondence invited, particularly from landscape gardeners, and park and cemetery superintendents.

	Size	Per 10	100	1,000

## HARDY NATIVE VINES AND CLIMBERS

Many plants here offered are of special merit for ground covering, and where needed in large quantities will be supplied at very low prices. *Parthenocissus (Ampelopsis) quinquefolia* var. *euglemanni*, *Lonicera halleana*, *L. flava*, *Polygonum cilinode*, *Celastrus scandens*, *Rubus hispidus* and *Vitis species* are particularly recommended. In soils adapted to its growth (peaty or loamy, and preferably moist), *Galax aphylla* makes a hardy evergreen undershrub covering of lasting beauty, being a rich green in summer and coloring vivid bronze tints in autumn and winter, an effect which must be seen to be appreciated.

### AMPELOPSIS. See Parthenocissus.

	Size	Per 10	100	1,000
<b>BIGNONIA crucigera (capreolata), Cross Vine</b> ..	6 to 18 in.	\$0 75	\$5 00	\$40 00

<b>MENISPERMUM canadense</b> .....		50	4 00	
<b>PARTHENOCISSUS (Ampelopsis) engelmanni.</b> This is the clinging form of the well-known Virginia Creeper, and was introduced by us several seasons ago. The leaves are much thinner and smaller than in the ordinary variety, and the whole plant lacks the coarseness that characterizes <i>A. quinquefolia</i> and it clings to walls like the ivy. The fall coloring is exceedingly brilliant, and in every way it is vastly superior to the common form, which is not used where the new variety is known and can be had. A fine stock ready for fall delivery.

## Hardy Native Ferns

A good collection of hardy native Ferns for park and cemetery planting, including the following varieties:

Adiantum pedatum, Aspidium spinulosum, Osmunda, in 3 vars.,  
 Aspidium acrostichoides, Dicksonia punctilobula, Polypodium vulgare,  
 Aspidium marginale, Onoclea sensibilis, Pteris aquilina.

Most of the above ferns can be collected to order at \$10 per 1,000, excepting the Osmundas, which are very heavy, at \$15 per 1,000. Only strong clumps will be sent.
